

## Product Overview

Stainless steel threaded rods handle a wide range of fastening jobs across communication sites, from mounting and bracing equipment to securing hardware on towers, shelters, and ground installations. The 304 stainless steel construction resists corrosion and withstands outdoor exposure, so connections remain reliable in the face of moisture, humidity, and seasonal temperature swings. Order them in standard sections or cut to the exact length your install requires.

- Available in 6' sections or cut to length
- Built from Grade 304 stainless steel for dependable corrosion resistance outdoors
- Fully threaded along the entire rod for adjustable, secure fastening
- Sold individually
